ARC

Prescription Printer Solution

"ARC-IT had a successful track record of installing and managing different solutions within the Health Sector."

WHO WE ARE

We have been working with the NHS for years and found that the "free services" that are provided to GP Surgeries with regard to IT and Print have fallen short. In many cases individual practices have had to spend money out of their own funds to receive services that allows them to function on a day to day basis.

ARC-IT Business Solutions have created a trialed and tested solution that solves the prescription printer issues that in the past have cost time and money to manage.
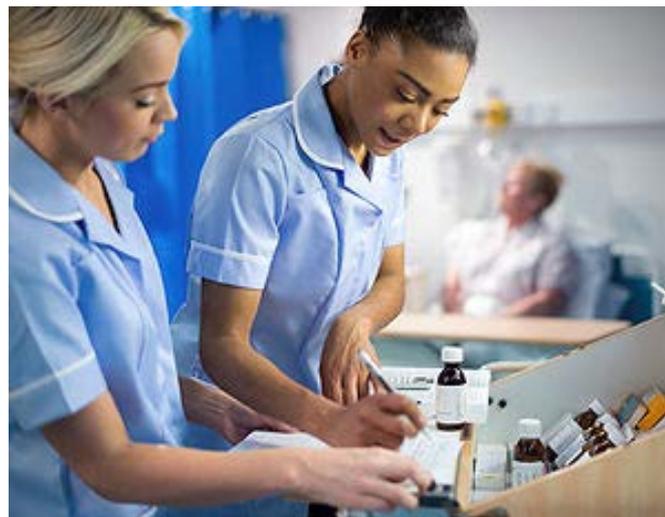

IN A NUTSHELL

At this point in time GP surgeries are given their printers from the CSU. They then have to purchase the consumables and wait unreasonable periods of time for support.

ARC will now provide a new fleet of printers that are fully supported for consumables and maintenance that costs the same if not less than surgeries existing spend just on consumables.

We'll even bolt-on photocopiers to this solution.

MEDIA

Prescriptions
Blood Forms
General Print

"I have worked with Alex for several years since this practice adopted his company's Print solution and have found him and his company to be professional and efficient. We not only immediately saved money with this option but also time – a valuable commodity in this sector. I have been happy to recommend Alex and his solution to other practices - several of which I know have taken advantage of this opportunity and are reaping the direct and indirect benefits. I wholeheartedly commend the services of Alex and his company."

NHS GP Surgery

EXAMPLE

A surgery in the South East, currently have 15,000 patients and use System One.

They were given their Brother printers by the CSU and had to purchase and manage the stock for the site. The printers were all different models which used different parts and all needing servicing at various times.

Keeping consumable stock for all the models of printers meant taking up space in the surgery. It also meant that the surgery's stationary budget was drained on a regular basis. Not to mention that someone had the enjoyable task of monitoring toner levels and best prices.

NOT IDEAL.

RESULT

ARC met with the relevant person(s) to understand the current costings involved and usage. Once this was established ARC completed a site survey and were able to ascertain the print volumes.

The new solution was rolled out across the surgery, with them enjoying the following advantages:

BENEFITS

Unified print devices
Unlimited onsite engineer support
Visibility over print costs
Savings of 20-30%
Automatic meter readings
Automatic toner ordering
Less stock onsite
